

News for our Natural Gas Customers

NH

Fall Into Energy Savings

Soon, the weather will turn cooler and nights will be longer. Take action now to make sure your home is ready to keep you comfortable when the cold weather comes.

Door and Windows:

- Replace old weather stripping around doors and windows
- Caulk around gaps in windows and doors
- Install storm doors
- Consider replacing older windows with newer, more energy-efficient models

Insulation and Air Sealing:

- Hire a contractor to ensure that your home is insulated according to recommended levels for your area

Heating System:

- Hire a qualified professional to clean/inspect your furnace
- Clean vents and other heating system components
- Replace your furnace filter regularly
- Install a Wi-Fi enabled programmable thermostat, which can save energy by automatically adjusting temperatures according to your schedule

Corrugated Stainless Steel Tubing (CSST)

CCST is a flexible, stainless steel pipe used to supply natural gas and propane in residential, commercial, and industrial structures. Coated with a yellow, or in some cases, a black exterior plastic coating, CSST is usually routed beneath, through, and alongside floor joists in your basement, inside interior wall cavities, and on top of ceiling joists in attic spaces.

While this type of pipe is safe, it is strongly recommended that you determine if the CSST system is properly bonded and grounded in order to prevent damage to the line.

If you are unsure as to whether your property has CSST or whether it has been properly bonded and grounded, contact a licensed electrician to arrange for a professional inspection.

Visit www.libertyenergyandwater.com for more information about CSST piping.

Protect Your Family From Carbon Monoxide

Carbon monoxide (CO) is an odorless, colorless and toxic gas. CO is produced whenever any fuel is burned, including gas, oil, kerosene, wood, and charcoal. If appliances that burn fuel are maintained and used properly, the amount of CO produced is usually not hazardous. However, if appliances are not working properly or are used incorrectly, dangerous levels of CO can result.

Reducing Your Risk

Install at least one CO detector in the sleeping areas of your home.

Purchase a model that has been tested and certified by Underwriter's Laboratories, Inc (UL). Check the unit periodically to ensure that it's functioning correctly.

Operate all fuel-burning equipment and appliances in accordance with the **manufacturer's instructions and safety recommendations.**

Have a qualified professional **check all fuel-burning appliances, furnaces, venting, and chimney systems** at least once a year.

Take Action

If your CO alarm is activated or someone suddenly starts experiencing symptoms such as headaches, nausea, dizziness, coughing, ringing in the ears, spots before the eyes, or reddened skin color, **get to fresh air immediately and call 911 and Liberty at 1-855-327-7758.**

Visit our website for more important information on CO safety.
