This Summer, It's All About

New Hampshire

Comm(YOU)nity Giving

Liberty prides itself on our involvement in local communities. Throughout the year, we look for opportunities to lend a hand to anyone who may need a little bit of help. Check out a couple of the great opportunities our employees have had the pleasure of participating in so far this year.

In May, a group of Liberty employees volunteered with members of Mascoma Lakeside Park Committee to clean up and remove thickets of non-native and invasive Japanese honeysuckle vine and

Japanese multi flora rose. The volunteers also removed several Black Locust trees and seedlings that were crowding out native plants in this woodland area.

In June, a group of Liberty employees spent the morning volunteering at the Salem Animal Rescue League (SARL) in Salem. The 17 employees helped perform some springcleaning tasks. Although

they may not be able to tell us, the animals surely appreciate all our employees' hard work to give them a lovely place to live until they find their "furever home."

Helping YOU Save This Summer (A New Spin on Ceiling Fans)

Ceiling fans make you more comfortable and help you save on energy bills. Here are some things about ceiling fans that you may not know.

Ceiling fans cool people, not the air – Airflow from the fan doesn't lower the temperature of the room, but creates a wind chill effect that makes you feel cooler, reducing the need for air conditioning. Ceiling fans spinning in an empty room is a waste of energy, so turn them off when you leave.

Set Spin Direction - Most ceiling fans include a switch that changes the direction of the blades. Ceiling fans should be set counterclockwise in the summer to help create a downdraft, which creates a cooling breeze.

PRO TIP: ENERGY STAR® estimates that you can save up to 20% on heating and cooling costs by adding insulation to the walls, basement, pipes, attic, crawl space and rim joists in your home. Check out our **Home Performance with Energy Star (HPwES)** to learn other ways to keep your cool, conditioned air inside. Visit nhsaves.com/residential/weatherization/.

Summertime Electric Safety Tip: We Want YOU Safe

Summertime and swimming go hand in hand, but it's important to keep electric safety top of mind. Be sure to keep all electrical toys and appliances away from the water. Also, make sure to never touch an electrical toy or appliance if you are wet or standing in the water. Install Ground Fault Circuit Interrupter (GFCI) outlets in all areas that could get wet, such as bathrooms and kitchens. These outlets protect people from electrical shock by shutting off power at the outlet if there is a problem.

Do YOU Know - About the Cost of Electricity

We often get questions from customers about the cost of electricity. Energy service costs have risen dramatically in recent years due to extreme weather and other events. But we have good news! **Liberty's Default Service Rate will be decreasing beginning August 1, 2023.**

Liberty buys energy off the open market and passes that cost directly on to customers. The cost is determined solely by market conditions – not Liberty – and is heavily regulated by the New Hampshire Public Utilities Commission. We do not benefit from the increased cost of energy. Visit our website for more information about the cost of electricity.
