

Warning: corrugated stainless steel tubing

Corrugated stainless steel tubing (CSST) is a thin-walled metallic gas piping product that can be used as an alternative to conventional gas piping material. This flexible piping is commonly coated in yellow plastic.

If your home uses CSST, we recommend that it is inspected on an annual or semi-annual basis by a qualified plumber for proper installation and bonding. Homeowners should also perform a visual inspection at least every three months to check for damage. CSST that is not properly bonded could cause an accidental leak or fire when struck by lightning.

2026 construction schedule now available

At Liberty, providing safe, reliable natural gas service is our top priority. Each year, we perform important system maintenance and infrastructure upgrades designed to strengthen our network, support growing communities, and provide continued reliability for our customers.

Construction activities are scheduled throughout 2026 in select areas of our service territory. While crews work to complete these infrastructure improvements as safely and efficiently as possible, some customers may experience brief interruptions of service during certain phases of construction.

Customers are encouraged to review the 2026 construction schedule to see if work is planned in their area. To view the schedule, scan the QR code or visit www.libertyutilities.com/construction/.
